

Ibrokhim Movlonov

SENIOR MOBILE ENGINEER

+998 90 980 1525 ibrohim.interview@gmail.com linkedin.com/in/ibrokhim-movlonov github.com/ibrohim ibrohim.github.io

Senior mobile engineer with 7+ years building offline-first, high-scale mobile products — from on-device AI at Apple to an events platform powering 150+ white-label apps. Deep in Swift, concurrency, and data-layer architecture; ships iOS and Flutter products end-to-end, drives AI-assisted engineering, and is founding engineer of an AI health app.

SELECTED ACHIEVEMENTS

- ▶ **Performance at scale:** cut app loading times 25% and post-release bugs 35% at EPAM while launching apps that passed **~500K downloads** in five months.
- ▶ **Offline-first architecture:** own the sync engine and prepopulated per-event databases that keep full event content available to thousands of attendees with zero connectivity, across 150+ branded apps.
- ▶ **AI engineering:** trained and evaluated Apple Intelligence LLMs inside a 100+ engineer program; co-built an agentic CI pipeline that turns Jira tickets into cross-platform architecture specs.
- ▶ **Product ownership:** founding engineer at an AI health startup — built its Flutter app from an empty repo to the App Store solo — plus two personal apps live on the stores.

EXPERIENCE

Senior iOS Engineer · ExpoPlatform, United Kingdom

Oct 2025 – Present

Stack: Swift, UIKit, SwiftUI, Swift Concurrency, Core Data, SQLite, WebSockets, React Native (Expo), XcodeGen, Firebase

- Develops a white-label events-platform codebase powering 150+ branded apps for large-scale international exhibitions from a single multi-target project.
- Owns the offline-first architecture end-to-end — delta-sync engine and Core Data persistence with prepopulated per-event databases.
- Resolved critical performance bottlenecks on the most data-heavy screens by re-architecting the data access layer with scoped fetches, lazy loading, and structured-concurrency parallelization on events with tens of thousands of records.
- Leads the data layer of the company-wide React Native (Expo) migration, designing the SQLite persistence and repository contracts adopted by feature teams across platforms.
- Delivered major capabilities from concept to App Store release — lead capture with offline autosave, interactive offline floor plans, deep-linked push navigation — and drove production stability for live events where downtime is not an option.
- Drives AI-assisted engineering on the mobile team: co-built (hackathon, team of 3) an agentic CI pipeline — Claude Code with Jira/Confluence MCPs — that reads a ticket, analyzes the iOS and Android codebases, and publishes a cross-platform architecture spec to Confluence.

Senior iOS Engineer · Turing, United States

Jan 2024 – Sep 2025

Stack: Swift, SwiftUI, UIKit, async/await, Actors, LLM integrations

- Designed and developed iOS apps using Swift, SwiftUI/UIKit, and modern concurrency (async/await, GCD, Actors).
- Employed LLMs within mobile applications to drive AI-powered features.
- Built and maintained new app versions, improving performance and reliability through robust testing and regular optimization.
- Collaborated with cross-functional teams (PMs, designers, QA) to deliver features from concept to release.

LLM Training — Mobile Engineer · Apple (via Turing), United States

Apr 2024 – Dec 2024

Stack: on-device LLMs, data/annotation pipelines, internal Apple tooling

- Collaborated with a 100+ developer cross-functional program to enhance Apple Intelligence features on iOS.
- Contributed to training, evaluation, and optimization of on-device Large Language Models for mobile platforms.
- Developed internal tools and automated workflows for data processing, annotation, and model validation pipelines.
- Ensured privacy-preserving computation and compliance with Apple's secure data processing policies.

Senior iOS Engineer · EPAM Systems, United States

Aug 2022 – Dec 2023

Stack: Swift, UIKit, unidirectional architecture, modularization, Fastlane/CI-CD

- Resolved critical performance bottlenecks, cutting loading times 25% and lifting overall app responsiveness 10%.
- Led end-to-end development and App Store launch of apps surpassing ~500K downloads within five months.
- Established robust testing procedures, reducing post-release bugs by 35%; introduced UI frameworks that improved user engagement 25%.
- Automated CI/CD pipelines and drove unidirectional architecture across a modularized codebase.

Lead iOS Engineer · Express24, Uzbekistan

Jan 2021 – Jul 2022

Stack: Swift, VIPER, Clean Swift, Firebase, feature toggles

- Promoted to Lead iOS Engineer: led the iOS team of a national food-delivery platform — task delegation, mentoring, code review culture, and hiring interviews that led to successful hires.
- Built applications from scratch to publication using clean architectures (VIPER, Clean Swift) with complex custom UI.
- Shipped live chat, deep Firebase integration, and feature-toggle-driven rollout across the product.

iOS Engineer · FINNET Technologies, United Kingdom

Jan 2020 – Jan 2021

Stack: Swift, Core ML, Google MLKit, Universal/Dynamic Links

- Applied Core ML and MLKit Pose Detection to power guided sports exercises.
- Implemented a Universal Links referral system that boosted users by 15+% of the total base.
- Localized the app into multiple languages including full RTL/Arabic support.

Earlier roles

Jan 2019 – Jan 2021

iOS Engineer · DataSite Technology, Uzbekistan — multimedia (Camera/Audio) features, MVC/MVVM/MVP architectures, storyboard and programmatic UI, PDF processing and generation.

iOS Engineer · StartUp Company, Uzbekistan — RESTful API integration, offline-first SQL storage, analytics-driven product decisions.

STARTUP & PERSONAL PROJECTS

ONU — AI Health & Prevention · Founding Engineer, Mobile (Apr 2026 – Present) — building the startup's Flutter app solo from an empty repo to the App Store: modular clean architecture (domain/data/state/UI kit), BLoC/Cubit, ObjectBox offline storage, RevenueCat subscriptions, AppsFlyer, Fastlane CI for both stores. [App Store](#)

Money Manager (Flutter) — personal-finance tracker with offline-first local storage. [Google Play](#)

AppLock — Privacy & Security (Swift · iOS) — privacy and security app built natively in Swift. [App Store](#)

SKILLS

Languages Swift (expert), Dart, Objective-C, TypeScript/JavaScript, Python, SQL, C/C++, Java

iOS UIKit, SwiftUI, Combine, Swift Concurrency (async/await, Actors), GCD, Core Data, SQLite, Realm, WebSockets, URLSession/Alamofire, Push Notifications (APNs, OneSignal), MapKit, Core Location, Core Bluetooth, AVFoundation, Core ML, Google MLKit

Cross-platform Flutter (BLoC/Cubit, ObjectBox, go_router, RevenueCat), React Native (Expo), expo-sqlite, Dart, TypeScript

Infra & tooling SPM/CocoaPods, XcodeGen, Tuist, Fastlane, CircleCI, Travis CI, Git, Firebase, Crashlytics, Sentry, Jira, Figma

EDUCATION

Inha University, Tashkent, Uzbekistan — B.Sc. Information and Communication Engineering

2015 – 2019
